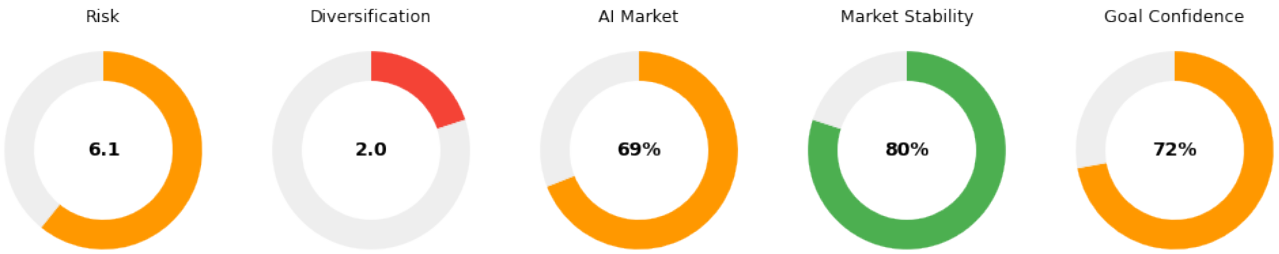
Financial Intelligence Report

Generated on 28 Mar 2026

1. Executive Summary

This report combines client profile inputs, current macro conditions, goal projections, and portfolio diagnostics into one deployment-ready plan.



⚠️	❌	⚠️	✅	⚠️
RISK	DIVERSIFICATION	AI MARKET	MARKET STABILITY	GOAL CONFIDENCE
6.1/10	**2.0/10**	**69/100**	**80%**	**72%**
Attention	Action Required	Attention	On Track	Attention

Source: Integrated planning stack | As of 28 Mar 2026, 05:52 PM

2. Client Profile

Attribute	Value
Age	25 years
Dependents	2
Monthly Income	₹50,000
Monthly Savings Capacity	₹22,500
Effective Monthly Savings	₹22,500
Behavioural Profile	Moderate
Source: Client declaration I As of 28 Mar 2026, 05:52 PM	

Insurance & Liability

Protection / Liability	Current Position	Status
Term Life Cover	₹1,000,000	Adequate
Health Cover	₹500,000	Adequate
Annual Insurance Premium	₹30,000	Ongoing
Total Liabilities	₹400,000	Monthly EMI ₹17,500

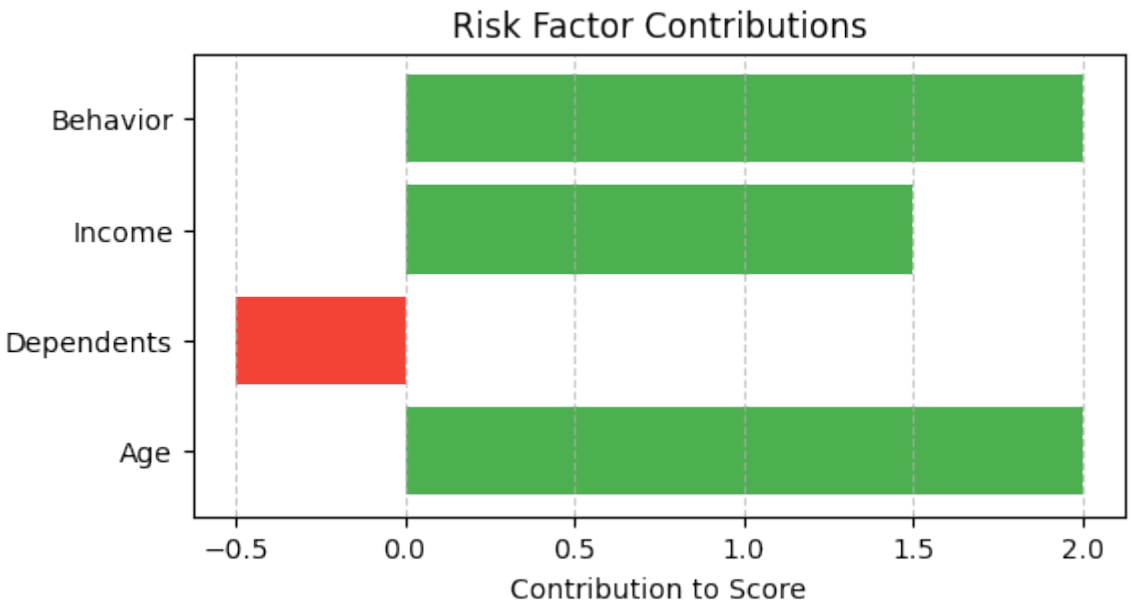
3. Risk Score Explanation

Your Risk Score is **6.08 / 10**, placing you in the **Moderate** category.



Methodology Note: Your risk score should match your ability to stay invested through volatility. It is calibrated so that the Conservative/Moderate/Aggressive bands reflect real-world risk capacity.
Mathematical Basis: Predicted by a tree-based ML model using weighted profile features: behavior (investment preference), savings-to-income ratio, age (risk capacity), and dependents. The score is then calibrated and assigned to deviation-based risk bands for Conservative/Moderate/Aggressive categories.

Factor	Contribution
Age	+2.00
Dependents	-0.50
Income	+1.50
Behavior	+2.00

4. Goal Planning Breakdown

Retirement

Assumptions Used
Inflation Rate: 6.5% — Source: inflation_data.csv
Expected ROI: 12.0% — Basis: Retirement projection base-case assumption
SIP Step-Up: 10.0% annual step-up
Tax Treatment: Pre-tax returns shown. LTCG @ 10% applicable on equity gains above ₹1L/year.

Goal Metric	Value
Goal Horizon	35 years
Target Corpus	₹135,933,823
Required Monthly SIP	₹8,339
Inflation Rate Used	6.50%
ROI Assumption	12.00%
Step-Up SIP Option	10.00% annual step-up
Source: Retirement planning engine I As of 28 Mar 2026, 05:52 PM	

5. Existing Portfolio Health

TOTAL CORPUS	NET WORTH	DIVERSIFICATION SCORE
₹900,000	**₹500,000**	**2.0/10**

WARN Attention
Your ₹199,980 in savings/cash is earning ~3.5% (savings account rate) while inflation runs at ~6.0%. Consider moving ₹49,980 to liquid mutual funds for better post-tax returns.

COVER Action Required
Your life cover (₹1,000,000) is below the recommended ₹6,000,000. Consider increasing term cover.

EMI Attention
₹17,500/month EMI deducted from savings capacity.

Asset Bucket	Current Allocation
Fixed Deposits / Bonds	55.56%
Savings / Cash	22.22%
Gold	11.11%
Mutual Funds / Equity	11.11%

Source: Portfolio Health Engine I As of 28 Mar 2026, 05:52 PM

6. Portfolio Rebalancing Action Plan

Action	Asset Class	Fund	Monthly SIP	Lumpsum	Urgency
INCREASE	Equity	PGIM India Large Cap Fund - Dividend	₹47,917	₹575,000	High
REDUCE	Debt	-	₹0	₹0	High
INCREASE	Gold	-	₹2,917	₹35,000	Low

Source: Portfolio Gap Advisor I As of 28 Mar 2026, 05:52 PM

7. Insurance & Liability Summary

Insurance / Liability	Current	Recommended / Action
Term Cover	₹1,000,000	₹6,000,000
Health Cover	₹500,000	Adequate
Total Liabilities	₹400,000	EMI ₹17,500/month

Source: Insurance inputs + liability schedule | As of 28 Mar 2026, 05:52 PM

Loan Type	Outstanding Principal	Monthly EMI
Car	₹400,000	₹17,500
Home	₹0	₹0
Home	₹0	₹0

Source: Insurance inputs + liability schedule | As of 28 Mar 2026, 05:52 PM

8. Target Asset Allocation

Reasoning: Based on Risk Score 6.1 and current Market Stability 80%.

Asset Class	Target Weight	Reasoning
Equity - Mid Cap	40.00%	Core growth exposure.
Equity - Hybrid	35.00%	Core growth exposure.
Debt	5.00%	Capital preservation and volatility dampening.
Gold	15.00%	Macro hedge and diversification.
Bonds	5.00%	Capital preservation and volatility dampening.

Source: Allocation Engine + macro overlay | As of 28 Mar 2026, 05:52 PM

9. Investment Mode Recommendation

SIP

Trigger Reason: Market is uncertain. Use SIP to average your cost over 6–12 months.

Deployment Plan: Deploy ₹16,667 per month for 12 months.

Expected Advantage vs Flat SIP: Likely smoother entry than lumpsum deployment in current conditions, with lower regret risk than market timing.

Source: Investment Mode Engine | As of 28 Mar 2026, 05:52 PM

10. Mutual Fund Recommendations

Aditya Birla Sun Life Liquid Fund -weekly IDCW (Debt)

Target Weight	AI Score	Benchmark	1Y Alpha	3Y Alpha	Information Ratio
12.50%	84.4/100	CRISIL Short Term Bond Index	-4.65%	-2.65%	-0.90
Source: Recommendation Engine + benchmark fixture I As of 28 Mar 2026					

Why Selected: Selected for resilient category-relative performance against CRISIL Short Term Bond Index.

Why Now: Debt exposure is timely while capital preservation matters more than chasing peak returns.

Risk Note: Lower drawdown profile, but returns may lag equity in strong bull markets.

Franklin India Aggressive Hybrid Fund - IDCW (Hybrid)

Target Weight	AI Score	Benchmark	1Y Alpha	3Y Alpha	Information Ratio
87.50%	53.6/100	Nifty 50 TRI	-22.08%	-2.92%	-0.92
Source: Recommendation Engine + benchmark fixture I As of 28 Mar 2026					

Why Selected: Selected for resilient category-relative performance against Nifty 50 TRI.

Why Now: Hybrid exposure fits the current market regime for your moderate profile.

Risk Note: Moderate volatility at 12.6% — stay invested through cycles for the thesis to play out.

11. Scenario Projections

Assumptions Used
Inflation Rate: 6.0% — Source: inflation_data.csv
Expected ROI: 12.0% — Basis: Goal horizon base-case assumption
Base Return Scenarios: Conservative 8%, Moderate 12%, Aggressive 15%
SIP Top-Up Rate: 10.0% annual step-up
Tax Treatment: Pre-tax returns shown. LTCG @ 10% applicable on equity gains above ₹1L/year.

SIP Projection Timeline

Year	Cumulative Invested Amount	Projected Value	Wealth Created
1	₹1,170,000	₹1,302,352	₹132,352
2	₹1,440,000	₹1,755,733	₹315,733
3	₹1,710,000	₹2,266,614	₹556,614
4	₹1,980,000	₹2,842,287	₹862,287
5	₹2,250,000	₹3,490,970	₹1,240,970
6	₹2,520,000	₹4,221,923	₹1,701,923
7	₹2,790,000	₹5,045,578	₹2,255,578
8	₹3,060,000	₹5,973,693	₹2,913,693
9	₹3,330,000	₹7,019,517	₹3,689,517
10	₹3,600,000	₹8,197,977	₹4,597,977
11	₹3,870,000	₹9,525,896	₹5,655,896
12	₹4,140,000	₹11,022,228	₹6,882,228
13	₹4,410,000	₹12,708,332	₹8,298,332
14	₹4,680,000	₹14,608,277	₹9,928,277
15	₹4,950,000	₹16,749,182	₹11,799,182
16	₹5,220,000	₹19,161,607	₹13,941,607
17	₹5,490,000	₹21,879,988	₹16,389,988
18	₹5,760,000	₹24,943,128	₹19,183,128
19	₹6,030,000	₹28,394,751	₹22,364,751
20	₹6,300,000	₹32,284,126	₹25,984,126
21	₹6,570,000	₹36,666,772	₹30,096,772

Source: Projection Engine + macro assumptions | As of 28 Mar 2026, 05:52 PM

Year	Cumulative Invested Amount	Projected Value	Wealth Created
22	₹6,840,000	₹41,605,246	₹34,765,246
23	₹7,110,000	₹47,170,042	₹40,060,042
24	₹7,380,000	₹53,440,594	₹46,060,594

33	₹9,810,000	₹160,907,019	₹151,097,019
34	₹10,080,000	₹181,602,266	₹171,522,266
35	₹10,350,000	₹204,922,189	₹194,572,189

Source: Projection Engine + macro assumptions | As of 28 Mar 2026, 05:52 PM

Expected Returns (Goal Horizon)

Market Scenario	Return Assumption	Projected Corpus	Inflation-Adjusted Corpus	Probability of Achieving Goal
Conservative	8%	₹66,619,733	₹8,667,575	N/A
Moderate	12%	₹204,922,189	₹26,661,446	72.1%
Aggressive	15%	₹500,382,787	₹65,102,412	N/A

Source: Projection Engine + macro assumptions | As of 28 Mar 2026, 05:52 PM

Step-Up SIP Comparison

Mode	Monthly SIP (Year 1)	Corpus at Goal	Total Invested	Wealth Multiplier
Flat SIP	₹8,339	₹135,933,823	₹3,502,249	38.81x
10% Annual Top-Up	₹3,163	₹135,933,823	₹10,750,908	12.64x

Source: Projection Engine + macro assumptions | As of 28 Mar 2026, 05:52 PM

A 10% annual step-up allows you to start with a lower SIP (₹3,163 vs ₹8,339) and still reach the same corpus.

12. Monte Carlo Simulation

Confidence Score: 72.1%
Confidence is below institutional comfort levels and needs remediation.

Fix Recommendation
Your current SIP capacity (₹22,500) covers 270% of the required SIP (₹8,339). Gap: ₹0/month.
Option 1: Increase monthly savings by ₹0 to meet the ₹135,933,823 corpus target.
Option 2: Extend retirement age by 1 years — required SIP drops to ₹0.
Option 3: Reduce retirement corpus target to ₹193,663,212 (achievable at ₹22,500 SIP = 38% confidence).
Recommended: option_2

13. Score Standards Reference

This appendix explains the methodology, mathematical basis, benchmark thresholds, and macro context behind each score used in this report.

Risk Score (1-10)

Target Benchmark: User-specific (life stage alignment)

User-Facing Summary: Your risk score should match your ability to stay invested through volatility. It is calibrated so that the Conservative/Moderate/Aggressive bands reflect real-world risk capacity.

Mathematical Basis: Predicted by a tree-based ML model using weighted profile features: behavior (investment preference), savings-to-income ratio, age (risk capacity), and dependents. The score is then calibrated and assigned to deviation-based risk bands for Conservative/Moderate/Aggressive categories.

Geopolitical Context: RBI rate-cycle shifts (repo hikes/cuts) change household risk capacity via disposable income (e.g., EMI burden). Higher geopolitical tension and volatility reduce effective risk tolerance.

Historical Calibration: Calibrated using ~10 years of Indian investor behavior proxies and market drawdown patterns to align typical risk outcomes with observed portfolio survivability.

Diversification Score (1-10)

Target Benchmark: 9.0 for Diversification

User-Facing Summary: A higher diversification score means your money is spread across the right assets, not just more assets. A 9.0+ score is a near-institutional standard for avoiding concentration drag.

Mathematical Basis: Penalty-matrix score starting from 10.0 and subtracting structured inefficiencies: cash drag, risk/asset mismatch, low equity exposure, and over-concentration (e.g., excessive gold or fixed deposits). Final score reflects how efficiently capital is deployed.

Geopolitical Context: Currency and global stress can change how defensive assets (gold/FDs) behave. This shifts what counts as a 'healthy' allocation balance.

Historical Calibration: Backtested against post-2008 crash portfolio concentration failures and how diversified allocations reduced drawdowns and opportunity losses.

AI Market Score (0-100)

Target Benchmark: 85 for AI Market Score

User-Facing Summary: This score tells you whether a fund is not only strong historically, but also suitable for the current market environment. 85+ funds are expected to have a better match to today's conditions.

Mathematical Basis: Weighted composite: 30% * 1Y return + 30% * 3Y return + 20% * consistency + 20% * market-fit bonus. The 85 threshold is used as a 'high enough' level for funds that score well on both track record and current suitability.

Geopolitical Context: Macro regime changes (e.g., VIX spikes and Fed-rate decisions) influence what 'market-fit' means. That bonus is dynamic, so the same fund can rank differently across market conditions.

Historical Calibration: Calibrated using Nifty bull/bear cycles since ~2000 to ensure funds scoring 85+ tend to outperform their benchmarks in the following window.

Market Stability Score (0-100%)

Target Benchmark: >80% (Green Light)

User-Facing Summary: Higher stability means markets are calmer and long-term SIP planning is more reliable. Below ~80%, uncertainty rises and your projections should be more conservative.

Mathematical Basis: Stability = 1 - Composite Risk, where Composite Risk = (35% * inflation impact) + (35% * geopolitical index) + (30% * VIX normalized). Inflation impact maps <=3%->0.0 and >=15%->1.0 (linear); VIX maps <=12->0.0 and >=35->1.0 (linear). A stability above 80% implies Composite Risk <= 0.20 (all drivers are relatively benign).

Geopolitical Context: Repo-rate decisions, India CPI prints, and global VIX are the live inputs. A single rate hike can quickly reduce the stability percentage by double-digit points.

Historical Calibration: Calibrated against episodes like the 2013 taper tantrum, the 2020 COVID crash, and the 2022 rate-hike cycle.

Goal Confidence Band (0-100%)

Target Benchmark: 85% probability of success

User-Facing Summary: Confidence around 85% means your plan is likely to work even in bad market years. If confidence drops, the system suggests adjustments so you can regain a safer probability of success.

Mathematical Basis: Final Confidence = Base Monte Carlo Probability * Macro Stability multiplier. Base probability comes from 1,000 Geometric Brownian Motion paths over the goal horizon, using expected returns +/- historical standard deviation (from ~15Y Nifty data). Confidence degrades when Market Stability < 0.6 because predictions become less reliable.

Geopolitical Context: Geopolitical shocks can reduce Macro Stability to ~0.3-0.4, temporarily lowering a high base-probability plan. This makes the system honest about black-swan uncertainty.

Historical Calibration: Calibrated using 1,000-scenario simulations on ~15Y Nifty data, aligning the 85% target with professional retirement planning acceptance levels.
